Description

Networking is considered to be a mysterious concept, by those that are not already experts. I intend to de-mystify some aspects of routing, by teaching basic concepts of BGP and BGP security in a hands-on lab setting.

BGP is becoming more and more relevant outside of pure networking. Developers need to understand TCP/IP for their own projects, micro-services use networking for performance and redundancy. Virtual Machines move from host to host, and need to have network traffic delivered to them. BGP is the backbone protocol of the Internet, and as a Data Center networking protocol for Facebook, Google, and Microsoft.

I will teach you the relevant basics of networking and how BGP is used in the wild. At my day job, I run the 4th most connected network in Germany, and are a developer with OpenBSD focusing on networking and OpenBGPD.

About your trainer: PETER HESSLER

Peter Hessler has been a developer with the OpenBSD project since 2008.

Originally from San Francisco he has an interest in how things work. An OpenBSD user since 2000, he moved to Germany in 2008, to Switzerland in 2013, then back to Germany in 2015. In his spare time Peter enjoys drinking beer, filling out Immigration documentation, and bad puns.
